

Metric Systems Corporation Delivers Secure, Reliable LMR Networking Solution to Assist U.S. Border Patrol Mission Success

VISTA, Calif., September 10, 2010 — Metric Systems Corporation (MSC) successfully completed phased delivery of its SAFARI™ Wireless Networking Controller to the Customs and Border Protection (CBP) Agency in support of their land-mobile radio (LMR) technology upgrade in the Yuma and Tucson, Arizona sectors. The SAFARI™ Wireless Controller enabled the CBP to cost-effectively build sector-wide, multi-vendor LMR networks incorporating both network-ready and legacy equipment. This LMR upgrade is a key component in the Department of Homeland Security's mission to secure the U.S.-Mexico border.

Completed in September 2010, the CBP SAFARI™-based network consists of one hundred plus sites scattered over some of the globe's most treacherous terrain. Interconnected via broadband wireless, microwave fiber, and commercial circuits, this network provides a secure and fault-tolerant system instantly to connect field agents with their headquarters and other field agents.

This is the largest digital CBP LMR network deployed to date. Its design introduced and proved a number of new productivity innovations which accelerate installation and enhanced operation, effectively reducing labor and operational expenses.

The SAFARI™ Controller is platformed on a single x86-high performance 1U shelf, incorporating an open architecture, Linux-based solution that provides an integrated gateway, router, and wireless system device application driver solution. Its open architecture, non-proprietary approach eliminates the need for multiple proprietary vendor boxes and enables end-user systems integrator to provide tailor-optimized solutions.

About Metric Systems Corporation

Metric Systems Corporation® designs and manufactures wireless networking equipment, components and end-to-end solutions for government and industry. We've been in the business of manufacturing and integrating reliable industrial-grade wireless networking systems for over 10 years.
