

FOR IMMEDIATE RELEASE

Metric Systems Corporation Introduces the Rhino Box™, an Integrated Transport and All-Weather Climate Controlled Electronic Equipment Enclosure

VISTA, Calif., September 10, 2010 — Metric Systems Corporation (MSC), announced today that its Rhino Box™ product, an all-weather, environmentally controlled electronic equipment enclosure, is now available for wider market distribution.

Specifically targeted at customers who need to quickly and reliably deploy where operation in and protection from environment damage determine mission success, the Rhino Box™ family of climate-controlled transport systems is built around the field-proven performance of an Hardigg® industrial- and military-grade ruggedized deployment package. Employing a microprocessor-controlled, two stage heat removal/circulatory system, the Rhino Box™ maintains a safe equipment operating environment in external air temperatures ranging from minus 30 degrees to 160 degrees Fahrenheit (minus 34 degrees to 71 degrees centigrade), and relative humidity levels to 100 percent.

On-site equipment maintenance is unnecessary since the Rhino Box™'s internal status can be monitored and controlled via an industrialized USB PC interface, an optional short range wireless link, or remotely via a wide area network connection (WAN). The standard Rhino Box™ is offered in a 14U package, while customer-specific solutions are also available in 9U to 24U Hardigg® MAC cases. Additionally, MSC offers a wide range of internal AC/DC power source, distribution, and redundancy options to meet demands presented by specialized equipment and unique operating environments.

Drawing upon its extensive global experience in staging and integrating communications and IT equipment for global deployment, MSC engineered the Rhino Box™ to specifically address the needs of the military, government, public safety, disaster recovery, industrial users. Field proven by the U.S. Department of Homeland Security on the U.S.-Mexico border, the Rhino Box™ is available as a customizable product available to meet specialized needs.

About Metric Systems Corporation

Metric Systems Corporation® designs and manufactures wireless networking equipment, components, and end-to-end solutions for government and industry. We have been in the business

of manufacturing and integrating reliable industrial-grade wireless networking systems for over 10 years.
